## 2022/2023 HESI OB MATERNITY Version 2 (V2)

### QUESTIONS & ANSWERS

At 14-weeks gestation, a client arrives at the Emergency Center complaining of a dull pain in the right lower quadrant of her abdomen. The nurse obtains a blood sample and initiates an IV. Thirty minutes after admission, the client reports feeling a sharp abdominal pain and a shoulder pain. Assessment findings include diaphoresis, a heart rate of 120 beats/minute, and a blood pressure of 86/48. Which action should the nurse implement next?

- a. Check the hematocrit results.
- b. Administer pain medication.
- c. Increase the rate of IV fluids.
- d. Monitor client for contractions.

A woman who thinks she could be pregnant calls her neighbor, a nurse, to ask when she could use a home pregnancy test to diagnose pregnancy. Which response is best?

- a. a home pregnancy test can be used right after your first missed period
- b. these tests are most accurate after you have missed your second period

---

**c.** home pregnancy tests often give false positives and should not be trusted

**d.** the test can provide accurate information when used right after ovulation
