
2023 Hesi Leadership & Management Exit Exam

Version 1 & 2 (V1-V2) – Next Gen Certified

(Actual Screenshots from exam taken in May 2023 A+)

Please note I am re-uploading again because some jelly person reported my TB study guide again. – Taken Spring 2023

****note**** these updated Hesi questions are not available anywhere else online. Please be sure to review and look up some of the answers to verify what I chose was right. I passed with >1309 but not sure which ones I missed since it does not show us what we got wrong at the end of the test. Version 1 and Version 2 is included all from the new Hesi generated questions for this year. Best of luck and happy studying to you all! (please feel free to email me w/any questions).

PS – I made some notes next to some of the questions 😊

1 of 55

The nurse calls the surgeon to report that a male client who was transitioned from a patient controlled analgesic (PCA) pump to a PO analgesic one hour ago, is now complaining in a loud voice and asking for the PCA pump. The nurse explains that the client's behavior is disturbing his roommate. The client's blood pressure has increased from 120/72 mmHg to 150/98 mmHg. Which question is **best** to include in the recommendation component of the SBAR report to the surgeon?

- ☒ A Could the client's behavior be a manifestation of drug seeking behaviors?
- ☐ B Can the client be transferred to a private room?
- ☐ C Can the PCA pump be initiated and prescribed for an additional 12 hours?
- ☐ D Why has the client become so agitated?

The nurse is assigned to care for four clients. After receiving the change of shift report, which client should the nurse assess **first**?

- ☒ A A client with diabetes and a history of coronary artery disease who is complaining of increased shortness of breath.
- ☐ B A 10-year-old with sickle-cell disease who has a morphine PCA pump, but is complaining of pain at 2 to 3 on a 10 point scale.
- ☐ C A 29-year-old who has had chronic kidney disease (CKD) for the past year and had an AV fistula placed yesterday.
- ☐ D An older client with COPD who is experiencing shortness of breath and whose O2 saturation rate is 88% on room air.

2 of 55

A healthcare provider notifies the nurse that new prescriptions have been written for a client. Which is the **first** action the nurse should implement?

- ☐ A Collect any needed forms such as laboratory and radiology requisitions.
- ☐ B Clarify the prescriptions with the unit clerk to ensure accurate transcription.
- ☐ C Document the time that the provider visited the client in the nurses' notes.
- ☒ D Read all of the new prescriptions for the client written by the provider.
