

Question: 1 of 100

Time Remaining: 01:55:33  
Pause Remaining: 00:05:00

A nurse on a medical-surgical unit is caring for a client who has a history of congestive heart failure (CHF).

Exhibit 1 Exhibit 2

### Vital Signs

2200:  
Temperature 37.2° C (99° F)  
Heart rate 89/min  
Respiratory rate 28/min  
Blood pressure 175/88 mm Hg  
Oxygen saturation 95% on 2 L via nasal cannula

0100:  
Temperature 36.9° C (98.4° F)  
Heart rate 105/min  
Respiratory rate 16/min  
Blood pressure 122/75 mm Hg  
Oxygen saturation 92% on 2 L via nasal cannula

Urine Output  
2300: 500 mL  
0000: 450 mL  
0100: 30 mL

Complete the diagram by dragging from the choices below to specify what condition the client is most likely experiencing, 2 actions the nurse should take to address that condition, and 2 parameters the nurse should monitor to assess the client's progress.

Question: 1 of 100

Time Remaining: 01:58:27  
Pause Remaining: 00:15:00

A nurse on a medical-surgical unit is caring for a client who has a history of congestive heart failure (CHF).

Exhibit 1 Exhibit 2

### Nurses' Notes

2200: Client admitted from the ED. Client has a history of CHF and type 1 diabetes mellitus. Client presented to ED with shortness of breath, bilateral lower extremity edema, and a weight gain of 3 kg (6.6 lb) in the past 2 days. The client was given 2 L of O<sub>2</sub> via nasal cannula and a peripheral IV was established in the left antecubital. The client was administered 80 mg of IV furosemide prior to leaving the ED for admission.

0100: The client reports dizziness, especially when getting up from the bed to go to the bathroom. Client also reports thirst. Lung sounds are clear. Bilateral pedal pulses are +1.

Complete the diagram by dragging from the choices below to specify what condition the client is most likely experiencing, 2 actions the nurse should take to address that condition, and 2 parameters the nurse should monitor to assess the client's progress.

Question: 1 of 100

Time Remaining: 01:57:54  
Pause Remaining: 00:05:00

PAUSE

A nurse on a medical-surgical unit is caring for a client who has a history of congestive heart failure (CHF).

Exhibit 1 Exhibit 2

### Vital Signs

2200:

Temperature 37.2° C (99° F)

Heart rate 89/min

Respiratory rate 28/min

Blood pressure 175/88 mm Hg

Oxygen saturation 95% on 2 L via nasal cannula

0100:

Temperature 36.9° C (98.4° F)

Heart rate 105/min

Respiratory rate 16/min

Blood pressure 122/75 mm Hg

Oxygen saturation 92% on 2 L via nasal cannula

Urine Output

2300: 500 mL

0000: 450 mL

0100: 30 mL

Complete the diagram by dragging from the choices below to specify what condition the client is most likely experiencing, 2 actions the nurse should take to address that condition, and 2 parameters the nurse should monitor to assess the client's progress.

The diagram consists of three columns: 'Actions to Take', 'Potential Condition', and 'Parameters to Monitor'. Arrows point from the 'Actions to Take' column to the 'Potential Condition' column, and from the 'Potential Condition' column to the 'Parameters to Monitor' column.

Actions to Take	Potential Condition	Parameters to Monitor
Administer IV antibiotics	Obstructive shock	Pulse pressure
Administer 1 unit of packed RBCs	Septic shock	Platelet count
Obtain a lactate level	Cardiogenic shock	Blood culture results
Administer IV fluids	Hypovolemic shock	Mental status
