
2022 HESI

Pediatric (PEDS) RN

Exam: Test taken

Jan. 2022 – A+

****Had to re-upload this doc after many students bought - because some snoopy person tried to report my document as copyright bs****

Note: I transcribed the questions from the pics to help you all out too 😊 Happy Studying!!

(All test questions are test questions I typed up from screen-shots of the actual Version 1 exam!)

-
1. The nurse is caring for a 3-year-old child who is 2 hours postop from a cardiac catheterization via the right femoral artery. Which assessment finding is an indication of arterial obstruction?
Right foot is cool to the touch and appears pale and blanched
 2. An infant with Tetralogy of Fallot becomes acutely cyanotic and hyperpneic. Which action should the nurse implement first? **Place the infant in a knee-chest position**
 3. A child admitted with diabetic ketoacidosis is demonstrating Kussmaul respirations. The nurse determines that the increased respiratory rate is a compensatory mechanism for which acid base alteration? **Metabolic Acidosis**
 4. Patient with diarrhea for 3 days – what does this cause? **Metabolic Alkalosis?**
 5. Which drink choice on a hot day indicates to the nurse that a teenager with sickle cell anemia understands dietary considerations related to the disease? **Lemonade**
 6. The HR for a 3-year-old with CHF has steadily decreased over the last few hours, now is 76 bpm, the previous reading 4 hours ago was 110 bpm. Which additional finding should be reported immediately to a healthcare provider? **BP 70/40**
 7. 2-year-old is admitted to the hospital with possible encephalitis, and a lumbar puncture is scheduled. Which information should the nurse provide this child concerning the procedure?
Describe he side-lying, knees to chest position that must be assumed during the procedure
 8. Patient has low platelets. **Bleeding precaution**
 9. The nurse is assessing an infant with pyloric stenosis. Which pathophysiological mechanism is the most likely consequence of this infant's clinical picture? **Metabolic Alkalosis**
 10. A month old girl is brought to the clinic by her mother because she has had a cold for 2 to 3 days and woke up this morning with a hacking cough and difficulty breathing. Which additional assessment finding should alert the nurse that the child is in acute respiratory distress? **Flaring of the nares**
