

The Nurse is reviewing medical prescriptions for newly admitted clients. It would be a *priority* for the Nurse to follow up with the physician if a client with

- A. A potassium of 4.5 mEq/L has Kayexalate (sodium polystyrene) prescribed
- B. Dilantin (phenytoin) level of 8 mcg/ml is placed on seizure precautions
- C. Sensitivity to Aspirin (acetylsalicylic acid) is prescribed Tylenol (acetaminophen)
- D. Sensitivity to Penicillin is prescribed Zithromax (azithromycin)

The Nurse should *intervene* if the Nurse notes a staff member

- A. Obtaining a client's consent prior to their operative procedure after receiving Ativan (lorazepam)
- B. Placing a client on the affected side following surgical repair of a retinal detachment
- C. Handling a wet cast with the palms of the hands
- D. Using a broad base of support while transferring a client

The community health Nurse is caring for the following clients. It would be a *priority* for the Nurse to initiate a multidisciplinary conference for the client who is

- A. 12 years old with Autism who is starting a new school and recently had a URI (upper respiratory tract infection)
- B. 17 years old, has type 1 Diabetes Mellitus, and a recent Hemoglobin A1c of 13%
- C. 52 years old, with Myasthenia Gravis, recently prescribed Mestinon (pyridostigmine) and employed as a mail carrier
- D. 70 years old, has schizophrenia, lives alone and reports hearing non threatening voices.

The Nurse from the postpartum unit has been temporarily assigned to the medical surgical unit. It would be *most appropriate* to assign this Nurse to the client who

- A. has returned from right total hip replacement surgery four hours ago
- B. is being observed for increased intracranial pressure
- C. had surgery two hours ago to remove the appendix
- D. is two weeks post partum being maintained on a mechanical ventilator for respiratory failure
