

PN Maternal Newborn Proctored Exam 2020 A

A nurse is reinforcing family planning options with a client who is requesting information about contraceptives. Which of the following client statements indicates an understanding of the teaching?

- a) "The diaphragm should be removed 2 hours after having intercourse."
- b) "I can use water-soluble lubricant when my partner wears a latex condom."**
- c) "It is okay for me to remove the birth control sponge within 2 hours after having intercourse."
- d) "When I use the birth control patch, it must be changed once a month."

a nurse is assisting with the care of a client who is postpartum and is receiving magnesium sulfate IV by continuous infusion to treat preeclampsia. Which of the following findings should the nurse identify as manifestations of magnesium toxicity?

- a) Hyperreflexia
- b) Decreased respiratory rate**
- c) Polyuria
- d) Decreased level of consciousness**
- e) Double vision**

A nurse is caring for a client who is at 30 weeks of gestation. Which of the following findings should the nurse report to the provider?

- a) **2+ urinary protein**
- b) Leukorrhea
- c) Spider nevi
- d) 30 cm fundal height

The nurse should identify that 2+ proteinuria is a manifestation of preeclampsia. Therefore, the nurse should report this finding to the provider.

A nurse is assisting with monitoring a newborn who is 3 days old and has received phototherapy. Which of the following laboratory results should the nurse recognize as an indication that the therapy has been effective?

- a) Glucose 45 mg/dL
- b) WBC count 10,000/mm³

- d) Hgb 16 g/dL

learnexams

A nurse is reinforcing teaching with a new parent about the prevention of newborn abduction. Which of the following statements by the parents indicates an understanding of teaching?

- a) "Some assistive personnel might not have name badges."
- b) "A nurse will carry my baby back to the nursery in their arms for routine care when it is needed."
- c) **"I will ask the nurse to take my baby back to the nursery if I need to leave my room."**
- d) "I can remove my baby's security band before giving her a bath."

A nurse is collecting data from a newborn whose mother had gestational diabetes mellitus. Which of the following findings should the nurse report to the provider?

- a) Calcium 9.2 mg/dL
- b) Heart rate 160/min
- c) Blood glucose 28 mg/dL**
- d) Axillary temperature 36.5° C (97.7° F)

The nurse should identify that a blood glucose of 28 mg/dL is below the expected reference range of 40 to 45 mg/dL for a newborn. Therefore, the nurse should report this finding to the provider.

a nurse is collecting data from a client who is 32 hr postpartum. Which of the following findings should the nurse expect?

- a) Saturation of one perineal pad every 15 min
- b) Fundus 2 cm above the umbilicus
- c) Temperature of 39° C (102.2° F)
- d) Urine output of 3,000 mL in 24 hr**

The nurse should expect postpartum diuresis to begin approximately 12 hr after birth. Therefore, a urine output of 3,000 mL in 24 hr is an expected finding for this client.
